

ABSTRACTCOMPOSITE SEALING CAP

5 The cap (1) comprises a head and skirt and is characterised in that it comprises two assembled parts:

 a) an inner part (3) comprising a so-called inner head (30) and a so-called inner skirt (31), typically with a rotation axis (12), carrying out the so-called
10 technical functions of said cap,

 b) an outer part (4) carrying out all or part of the decorative function of said cap (1), so as to be able to modify the appearance of said cap (1) at will without having to modify said technical functions.
